Subject: Temp & Ventilation problems in the Fitness Center

Several of us had to cut our 11-11:30 workout short today due to becoming lightheaded from the heat & lack of ventilation. With the "fire exit" door now locked (preventing fresh air and a breeze as well as preventing the ability to workout outside while maintaining access to the equipment), the two fans that are in the gym do not provide enough air circulation and the temperature is high, especially with the outside temps being high as well.

On top of this, the drinking fountain in the gym is barely releasing any water and what it does release is quite warm.

Hope you can do something so we don't get heat stroke or faint without adequate air circulation.

Thank you,

Kris Colt, Manager
